

A 3D perspective view of a road network, showing a highlighted path through a landscape with trees and terrain.

We imagine change.

We propose methods and pedagogical approaches that move away from design processes that are overly linear to create more flexible and transparent approaches to park design that include a wider range of skills, knowledge, and voices throughout the design process.

How do we increase quality?

We develop methods and processes that move beyond conventional consultation models toward more collaborative and co-created public spaces that recognize the complex, layered, and multivariate ways parks are used.
